

## Open Minds® Learning Network on Collaboration

Our intention is to provide support and insights to both individuals and organisations. Effective collaboration has the potential to help solve complex issues. It can create breakthrough thinking that leads to improved performance and also offers the chance for transformation both within and between organisations. One of Open Minds guiding principles is to “give stuff away”, hence the offer of free membership. We also offer additional services that provide members with added value and bespoke support in creating collaborative approaches.
